operiteation. The fundant citizen fine facting, finase (CAXIA) polypeptide and polypurclectide are useful in preventing, ameliorating, creating diseases associated with human CRIK dysfunction such as obesity and obsestly-associated comorbidities (e.g. hypertension, coronary artery can obsestly-associated comorbidities (e.g. hypertension, coronary artery cancer including endometrial, breast, prostate and colon cancer; anorbexta, canchexta, bulimia, central nervous system disorders (e.g. mood disorders, anxiety disorders, Parkinson's disease, or diabetes. The secan also be used to treat pain associated with the disorders. The human CRIK polypeptide is also useful in diagnostic assays or in genetic testing. The expression vector or the reagent is useful in preparing a medicament for modulating the activity of a human CRIK in a disease, e.g. obesity, disease. The fusion protein is useful in preparing antibodies against a CRIK polypeptide and for use in various assay systems. The methods are useful in producing and detecting the polymucleotide and polypeptide and for use in various assay systems. The methods are useful in producing and detecting the polymucleotide and polypeptide and columnant columnary disease. The fusion protein is useful the will be human CRIK polypeptide. This polymucleotide sequence represents a DNA sequence encoding a human CRIK protein of the invention
citron rho/rac-interacting kinase polypeptide. The isolated polynucleotide comprises a 6165 or 8603 base pair sequence, given in the specification. The human citron rho/rac-interacting kinase (CRIK)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates human kinases (PKIN) and their corresponding nucleic acid sequences. PKIN and its DNA are useful for diagnosing, cureating cancer, an immune system disorder (e.g., acquired immune deficiency syndrome (AIDS), Addison's disease, allergy, asthma, atherosclerosis, multiple sclerosis, psoriasis), disorders affecting growth and evelopment (e.g., arteriosclerosis, cirrhosis, hepatitis), cardiovascular disorder (e.g., hypertension, myocardial infarction, Goodpasture's syndrome), and a lipid disorder (e.g., fatty liver, Gaucher's disease, Niemann-Pick's disease, hypercholesterolaemia, hyperlipidaemia, obesity), and for assessing the effects of exogenous compounds. Anti-PKIN antibody is useful in a diagnostic test for a condition or a disease associated with the expression of PKIN in a biological sample. A composition comprising PKIN or an agonist or antagonist of PKIN is useful for treating a disease or condition associated with decreased or increased expression of functional PKIN. PKIN is useful in a number of drug screening techniques and to analyse the proteome of a tissue or cell type. PKIN DNA is useful for creating to the proteome of a tissue or cell type. PKIN DNA is useful for creating to knockin humanised animals or transgenic animals to model human diseases, and in somatic or germline gene therapy. The present sequence is human

The isolated polynucleotide comprises a 6165 or 8603 base pair sequence, given in the specification. The human citron rho/rac-interacting kinase (CRIK) polypeptide and polynucleotide are useful in preventing, ameliorating, or treating diseases associated comorbidities (e.g. hypertension, coronary artery and obesity-associated comorbidities (e.g. hypertension, coronary artery disease, hyperlipidaemia, stroke, gout, osteoarthritis, some types of cancer including endometrial, breast, prostate and colon cancer), anciexia, bullmia, central nervous system discorders (e.g. mood disorders, anxiety disorders, Parkinson's disease or Alzheimer's disease), chronic obstructive pulmonary disease, or diabetes. These can also be used to treat pain associated with the disorders. The human CRIK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   850
polypeptide is also useful in diagnostic assays or in genetic testing. The expression vector or the reagent is useful in preparing a medicament for modulating the activity of a human CRIK in a disease, e.g. obesity, a central nervous system disorder, or chronic obstructive pulmonary disease. The fusion protein is useful for generating antibodies against a CRIK polypeptide and for use in various assay systems. The methods are useful in producing and detecting the polymucleotide and polypeptide and in screening for agents that modulate the activity of the human CRIK polypeptide. This polymucleotide sequence represents a DNA sequence relating to the human CRIK protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                               09

Dipippo VA;

NOVX polypeptides and polymucleotides are used to prevent, diagnose or treat a medical condition in human related to the aberrant expression and activity of NOVX polypeptides. For example, NOVX polypeptides and polymucleotides may be used to treat disorders associated with decreased copyrucleotides may be used to treat disorders associated with decreased expression or activity of NOVX by supplementing the patient our production or to rectify mutations. Conversely, antisense NA molecules may be administered to down regulate expression of NOVX polypeptides by binding with the cells own genes and preventing their expression. NOVX polymucleotides and complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar sequences in samples, and so which patients may be in need of restorative therapy. NOVX polypeptides may also be used as antigens in the production of antibodies and in assays to identify mediators in the production of antibodies and in assays to identify may also be used to medulate NOVX polymeptide antibodies, agonists and artagonists may also be used as diagnostic agents for detecting the presence of NOVX in samples. NOVX polypeptides and polymucleotide expression and activity of NOVX polypeptides and polymucleotide may be used in this way to prevent, diagnostic agents for detecting the presence of NOVX in samples. NOVX polypeptides and polymucleotides may be used in this way to prevent, diagnostic agents for detecting the presence of NOVX in search and disorders, anotexia, cancer, cancer-associated achieves and cancers. And the various dysliptideamias, metabolic disturbances associated with obesity, the metabolic syndrome X and the various dysliptideamias, metabolic disturbances associated with chronic diseases and various cancers. They may also be used as antibaterial nover and a manual agents. The present sequence represents DNA encoding a human NOVX protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to a method for identifying a compound capable of modulating pain or painful disorders. The method comprises seasying the ability of the compound to modulate specific nucleic acid expression or polypeptide activity e.g. potassium channel, or kinase expression/activity. The method and compounds are useful for treating pain or painful disorders e.g. inflammatory pain, chronic pain, neuropathic pain, causalgia, fibromyalgia, cancer pain, migraine/headache associated with pain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            360

No. is the number of results predicted by chance to have a . score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 33, 8 Sequence 3, 8 Sequence 3, 8 Sequence 3, 8 Sequence 1, 9 S

Patent No. US20020132322A1

GENERAL INFORMATION:

TITLE OF INVENTION: ISOLATED HUMAN KINASE PROTEINS, NUCLEIC

TITLE OF INVENTION: THEREOF

TITLE OF INVENTION: THEREOF

FILE REPERENCE: CL001164

CURRENT APPLICATION NUMBER: US/09/804,471A

CURRENT FILING DATE: 2001-03-13

NUMBER OF SEQ ID NOS: 4

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
